

Creating an online portfolio

1. Check your email. I sent you a screen shot with your username and password.
2. Go to www.weebly.com and choose login or login for education

3. It should look like

this.

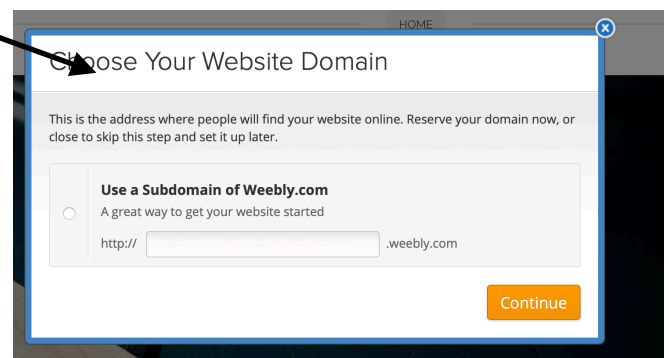

4. Type in your given username and password.

5. You must choose a domain name.

Please do NOT include your first and your last name. This is especially important if you are not 18.

6. Choose a theme that you like.

7. Start to Build on the Home page by adding a title and image of something you have made, preferably in the last year.

If you want a title, click and drag it to the place you want it. When you want to add an image, click and drag. To edit a photo/placement, click on the item you added and you should get a pop up like this.

8. Add a page for your project, "What you don't know is". You can use that as a title or name it what it is about, such as Cystic Fibrosis. Click on the plus next to pages and you can title it and choose a header, I recommend a short header.
